### Abstract

Radio has continued to support education around the world. Sound recording has given the opportunity for the selection and creation of different subjects. The radio has provided important information to the people who are far away on time. The radio supported by written materials and teachers has continued to bring everyone closer to their educational goals in the 2000s. Radio has fulfilled this function through the lessons appropriate to its target audience. The preparation of radio lessons, which has carried out the educational function for many years, required a process and teamwork.

This study primarily focuses on the first educational radio broadcasts that explain how the first radio broadcasts begin and how they become widespread and fulfill the educational function. Then, respectively; preparation of radio lessons, pre-production procedures, production procedures, post-production procedures and the benefits and limitations of radio lessons are explained.

**Keywords:** Distance education, open education, radio lessons.
