Abstract

The primary aim of this study is to determine/ investigate the opinions of administrators and teachers working at vocational high schools. the study was designed as a survey study and it was a quantitave study. The population of the study was formed by school administrators and teachers (n=348) working at vocational high schools located in the city center of Bolu. In the fall semester of 2008-2009 academic year. Some of the findings of the study are as follows : School administrators and teachers are respectful to each other but they are not open to criticisms, they do not develop empathy and the administrators send the messages on time, there was a significant meaningful difference between the opinions of administrators and teachers when the variable years of experience is concerned.

Key Words: Communication, Teacher, Administrator, Vocatioal High Schools.
