### **Abstract**

In this study, it was done to use travel observation method in science lesson in Turkey and to make use of educational compilation and subject method. The articles and theses of the travel observation method applied to elementary school students and teacher candidates in the study were examined and introduced. In this study, the necessity of travel observation method in terms of importance and students in teaching science lessons was mentioned and suggestions. Knowledge and concepts related to science, The travel observation method can be used in order to make it more clear, concrete and more student-centered. In this way; Apart from classical learning methods, it can be aimed to present a learning environment which is more naturally fed from daily life and experiences. With this method, To gain awareness about simple science phenomena, to increase curiosity, to activate research and learning desires. In addition, it is important for the candidates of the faculties especially in the faculties to give trainings on how to plan and implement the travel observation method. Researchers; It is recommended that studies that contribute to the development of applicable methods of science teaching in life be made.
