Abstract

Reading of a learning path from the fact that it is the wish of everyone's reading habit as necessary to the transaction is accepted. This situation is all the more important for Turkish teacher candidates. Here, as a study group of Siirt, Turkish Education Department of the Faculty of education at the University of education 265 teacher candidate has been selected. In the collection of the data, let's focus on the side of the prospective teachers developed Red (2012) attitude towards the Scale Reading Habit. SPSS Package programme in terms of different variables using 22.0 analysed. Analysis as a result of the attitude of the habit of reading books all prospective teachers for the high level of child size. Class variable to the first three child dimension 2.no significant difference in favour of the class when the last child did not show significant difference for the dimension. The gender variable in terms of the difference in favor of the first child-sized girls while other significant difference was found for the lower dimensions. The financial situation is good, does not affect the level of attitude; for negative affects two child dimension. The results are discussed and recommendations presented in accordance with the literature.
