Abstract

The purpose of this study is to examine the attitudes of secondary school students towards music. The study group is composed of 172 secondary school students of a private school in the centre of Ankara. The study was carried out in Fall term in the 2018-2019 Academic Year. To collect data, the interest in music scale, 5 point Likert Scale, was used. In analyzing the data, Frequency, the T-Test and ANOVA in independent groups in SPSS programme were used. To determine from which group the difference arouse, Tukey test was used.

It has been determined female students have negative attitudes towards playing an instrument and going to a concert. It has also been found out female students have more negative attitudes towards playing an instrument and going to the concerts than male students.

Keywords: Music, Music Education, Interest in Music.
