Abstract

Ear training is an important part of music education. Student should not only read, write or play the music, but also determine the notes, intervals, scales, chords, and distinguish from each other. To develop this ability, music schools have different curriculums or course programs. However, students may need a person who can help them about questioning with right questions in right level. This person can be a teacher or a friend. At this point, numerous applications that can help the student could be found on the internet. Those applications written in Java or ActionScript programming language have many differences on subject presentation, content, the way using the screen space etc. The purpose of this study is to examine these applets and find out the advantages and disadvantages in comparative way.

Key Words: Ear Training, Online, Application.
