Abstract

Technology has an important place in our lives. We use all the technological equipments from morning to sleeping. One of the most important technological items are computers. Computers have an active role from designing to producing.

Therefore, to learn and to teach the computer has become a necessity. With the mentioned requirements are met at every stage of education and training. Because of this there are computer classes in schools and universities. Courses and other narratives are shaped based on the use of computers.

In this study, it was investigated that how students perceive computers. It is investigated whether the students perceive computers just as social networks or programs that have been in the center of the life.

For this purpose, in order to assess perspectives with the computer Malatya Vocational School students were surveyed. In the survey, it has been revealed about students that how they perceive computers, how much they know about computers and with which purpose they use computers. The findings were discussed in the light of results.

Keywords: Vocational School, Computer Usage.
