Abstract

The purpose of this study is to determine the quality level of lecturers of music education departments. This is a descriptive research seeking to determine the existing situation. The study universe is, 137 students of Music Education Department of Balıkesir University. The quality expectations scale for higher education prepared by Saydan was used as data collection instrument of this research. The Cronbach Alpha reliability coefficients of the factors was calculated between 0,721 and 0,894, and they proved to be reliable. The results of the factor analysis showed that the factor loadings were varied between 0,6 and 0,9 and the measurement made was considered to be valid. On the data obtained from the survey, statistical analysis were made including mean, standart deviation, one way anova, tukey multiple comparison and independent samples t-test. According to the findings, it is concluded that most of the lecturers meet the expectations of the students.

Keywords: Quality, music education, student opinions.
