Abstract

This study examines students' parents who are among the effective factors in learning in different aspects. This research aimed to determine contribution of parents and expectation of students. Determination of parents' contribution who are officially registered in e-school to student, finding out parent who is actually interested, learning how child perceives parents and determining how parents perceives himself as parents. Research is a descriptive study in qualitative terms. A structured interview technique was used. Participants were among lower, middle and higher educated parents and their children. Interviews were recorded. The data analyzed with content analysis method. It was tried to find out expectations of students, perception of parents on their duties and responsibilities and contributions. As there is not enough work in literature, it is thought that work will contribute to field. As a result, it is seen that student expects some support from his parents in education process.

Keywords: Parent perception, parent expectation, student's parent.
