Abstract

The aim of this study is to determine the expectations of the organizations, operating at the public and private sector, from the training offered to students who are graduated from construction department. In this context, the province of our country employers in the private sector and authorized persons were interviewed and it was determined that what they expected from the vocational schools by making survey. The survey consists of 17 questions prepared by the Likert scale 5s and statistical analyses were performed. 300 people participated in the survey. The study provides informations about the training of construction department at vocational school and the results of the research has been reached by revealing the purpose, methods and hypotheses. After the study, it was determined what the expectations of the organizations, operating in the public and private sector, from the graduates of construction department. The most important result found in the survey is that the graduate students' technical practice during their training is not enough for the sector.
