### Abstract

This study aims to evaluate the efficiency of in-service training activities which are arranged for all branch teachers of all secondary schools in the central district of Muő and it also aims to evaluate the places hosting this activities. The universe of the research is composed of 1100 branch teachers who are working in 48 secondary schools in the center of Muő city in 2016-2017 academic year. The sample of the study is composed of 270 secondary school teachers working in 22 secondary schools located in the central district of Muő and determined through unsorted sampling. *The Assessment of in-service training activities* questionnaire consisting of 24 items of 5 Likert type prepared by the Education Research and Development Department (EARGED) which is the research and development (R & D) department of the Ministry of National Education was used. The questionnaires were handed over to the teachers by the research group. The data obtained in the study were coded and loaded on a computer and analyzed using the "Statistical Package Program for Social Sciences (SPSS) 11.0 for Windows" statistical program. As a result of applying Cronbach's Alpha method, the reliability coefficient was found to be 0.83.
