### Abstract

This study is aimed to reveal the similarities and differences of curriculums (4 years) of the public universities in our country, which educate the Chemistry Teachers. Accordingly, 11 different university's Chemistry Teacher educating 4 year-curriculums that can be reached on internet have been examined. The courses in the curriculums of universities are classified as obligatory (courses on subject area, courses on teacher training and general culture courses) and elective. Furthermore, number of the obligatory and elective courses, percentage distributions, course credits and credit totals according to the European Credit Transfer System (ECTS) were compared in tables. These tables show that there are differences compared to the universities, with regard to the number of courses, percentage distributions and the ECTS credits for each course defined.

**Keywords:** Curriculum, chemistry teacher, university.
