Abstract

As well as theory lessons which is given at vocational high school in two years, application courses have great importance for emphysement after graduation. The appropriate workshops and materials must be provided for these courses can be run correctly. Together with theoretical training on materials such as wood, stone and mosaic; one to one practices on ateliers are provide students to have full knowledge about these materials and comprehend them. In this study; as well as the theory of wood and mosaic lectures which are given by me between past and present in the scope of the Mimar Sinan Fine Art University, Vocational School of Architectural Restoration Program, the applications made in the workshop will be examined and will be dealt with in conjunction with the concept of protection and learning outcomes will be assessed.

Key Words: Vocational schools, Practice Course, Conservation Concept.
