Abstract

Accounting education in Turkey is taught at Commercial Vocational School in secondary education, at Associate and Bachelor' degree, programme of Master and Doctoral in Higher Education System. Accounting education in Bachelor' degree is mostly taught in business programs in the faculties of the university department, as it is also less as economics, finance and often theoretical training in other programme. In recent years the School of Applied Sciences also participated in this training.

When the accounting education at the School of Applied Sciences is examined, as well as the application of theoretical knowledge is seen that even last year that left almost applications included. When the purpose of these colleges is considered, it could be said that the structure which is provided personel requirements of companies who is capable of using theory and practice by combining theory with practice.

Accounting education in Bachelor's degree, while contributing to the growth of the company employees on positions of Administrative; in Associate's degree is provided a intermediate employee for the companies. It is intended to train the staff to work in the public and businesses companies in the field of auditing and accounting owing to programme of accounting, audit and accounting audit at the School of Application Science.

Key Word: Accounting, Education, Field, importance, development.
