Abstract

The aim at this study is to determine the educational expectations of institutions in accounting and finance sector from graduates students of the accounting and tax department. In this context, the private sector employers in our country and the authorities in the public were interviewed and a survey was conducted to determine what the expectations were from vocational schools.

In the study, information about vocational college accounting and tax department education was given and the purpose, method and hypothesis of the research done were revealed and the result was reached. After the study, it was determined that the expectations of the public and private sector organizations operating in the field of accounting and finance graduates of accounting and tax department in vocational schools. The results of the research reveal that the graduates cannot receive the industry expectations as much as the training courses they have received during the training period and that they can receive support from the sector.
