Abstract

In education; learning environment, its organization and how to use it effectively is of great importance in making students acquire qualifications. The environment where teaching takes place is highly influential in teaching and quality so it is necessary to prepare environments where permanent and effective learning take place without loss of time and effort. A well-organized learning environment and learning with tools are expected to be more effective. The purpose of study is to describe situation in secondary school by presenting opinions of students and teachers about position, positioning and adequacy of materials. The research was of qualitative type and data were obtained through focus group interview. The study group consisted of 20 teachers and a group of 20 students in secondary schools in Kırşehir province and districts. As a result of study, it was found out teachers and students have same or different opinions on issues related to mobilization.

Keywords: Mobilization of class, learning environment, teaching material, organization of classroom.
