Abstract
The information and communication technology course taught at vocational schools is a course that teaches the computer and its use, which has an important place in our lives. In the content of the course, the parts that make up the computer in general, the use of the computer and the programs used are taught to the students. In this study, matters such as whether the information and communication technologies course attained its purpose and which achievements it brings to the students are researched. The opinions of the students about the course, who were selected as the sample and who were studying at Inonu University Malatya Vocational High School were collected by answering the prepared questionnaire. According to the results of the questionnaire, it was determined that the students who took the courses improved their computer equipment knowledge and their usage skills. In addition, it has been concluded that the computers have an important role in their private and professional lives, and students value the computer use.
