Abstract

Computer technologies have been an integral part of educational life. The preparation of the course material that will appeal to the senses in the learning process clearly put forward the gains and the development of new learning methods, learning will play an important role in increasing the level of problem.

The stage of preparation of written and visual material, ideas, and events should be transformed to post. With scenario writing has been characterized of which it will be heard and seen, should create a storyboard. Words in would revive scenes of events are shown schematically which it's in this draft. Team visualizations are rendered such as movement, shooting angles and interactions. Prepared this draft is expressed as a storyboard. The interaction between students with course material is important where in the electronic environment in the education system. One of the most fundamental problems is motivation of the students. As an electronic content prepared pedagogical studies will be discussed in detail.

Keywords: Mobile learning, course materials, scenario, storyboard, force and motion.
