**Abstract**

Ethics is a complicated notion which is tried to be connected with morality, religion, belief system, tradition, culture and sometimes law and order. Also, ethics may depend on countries, societies and cultures. This situation derive from ethics' abstract nature and its' wide extent. Although ethics can vary from society to society, in most society some basic behavior like honesty and respect are accepted as ethical whilst theft, cheating, lie are accepted as unethical (Obuz, 2009: 11).

The aim of this study is evaluating trade vocational high school students' computer using behavior within the context of ethics. The research is conducted with qualitative design and data are collected with questionnaire method. The questionnaire is applied to 55 students who attend computer class in trade vocational high schools.

**Key Words:** Ethics, professional ethics, Unethical behavior.
