Abstract

The purpose of this study was to define students' perception of success in piano education, and to determine the characteristics of successful student and the factors affecting student success. Qualitative research method and mutual data collection method were used in this study. Sample of the research was the students of Necmettin Erbakan University, Ahmet Keleşođlu Education Faculty, Music Education Department in 2016-2017. Semi-structured interview form created by the researchers was interviewed with the students and the data was analyzed by descriptive analysis method. It's seen that the students attribute their perceptions of success in piano lesson, successful student profile and factors affecting success of a student to the student's impulsive, variable and controllable reasons.

Keywords: Piano education, music education, perception of success.
