Abstract

Depending on the rapidly improving techology, information Technologies have started to play a crucial role accross the globe. İn this sector, there has always been a need for gifted technical staff who are able to keep up with this quick improvement. İn this research, we examined what South Anatolia region information sector expects from the graduated students of the vocation schools and how these graduated students may contribute to this sector. İf we are able to transform the region into the information society, it would help that region to enhance economically and socially. For this reason, we disscussed about the issues with the firms that operate in the region. İn addition to that, we conducted a detailed survey and we determined what the basic needs are in the region. Also, we decided what the expectations of these firms from graduated vocation school students are. Our survey, which is sent to fourty companies, is made up of twenty questions.

We evaluated the results and we draw some statistical conclusions from these results. As a result, we realized that there is a great deal of need for gifted techical staff who are eligible for developing software. Therefore, we deduce that graduated students from vocation schools are not able to meet the needs for the software development. Hence, it is resulted that these companies would need to obtain these employers out of the region.
